Modules

“An app within an app”

Separation of concerns

Example Module

```
<div ng-app="myApp">
  <div>
    {{ 'World' | greet }}
  </div>
</div>
```

```
// declare a module
var myAppModule = angular.module('myApp', []);

// configure the module.
// in this example we will create a greeting filter
myAppModule.filter('greet', function() {
  return function(name) {
    return 'Hello, ' + name + '!';
  };
});
```
