

A function that executes when the compiler encounters it in the  
DOM

**Directives**

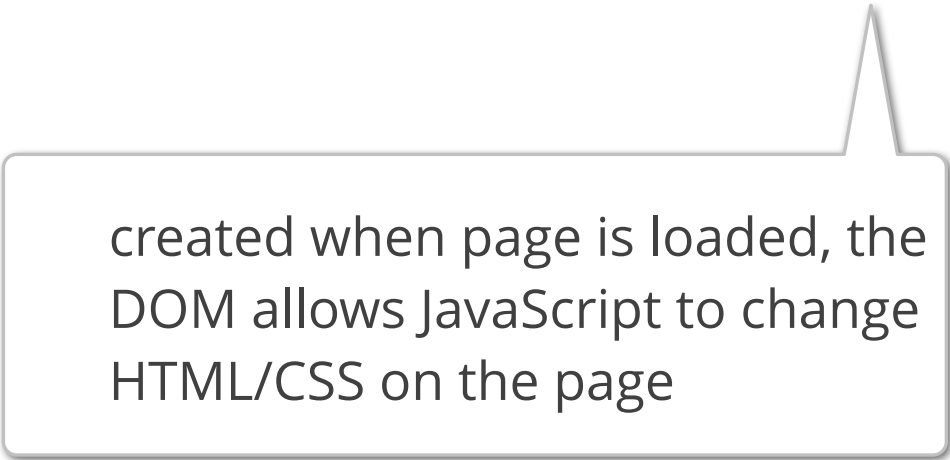

Attributes that extend HTML

Angular comes with built-in directives, but you can also build  
custom directives

compiler teaches  
browser what to  
do with directives

created when page is loaded, the  
DOM allows JavaScript to change  
HTML/CSS on the page

```
<tag attribute="value">content</tag>
```

# Directives

Attributes that extend HTML

A function that executes when the compiler encounters it in the  
DOM

Angular comes with built-in directives, but you can also build  
custom directives

# Examples of Directives

```
<div ng-app="" ng-init="firstName='John'">  
  
  <p>Name: <input type="text" ng-model="firstName"></p>  
  <p>You wrote: {{ firstName }}</p>  
  
</div>
```
